Undergraduate Thesis

Early Depression Detection From Social Network Using Deep Learning Techniques

Supervisor: Mr. Faisal Muhammad Shah, Associate Professor, Dept. of CSE. AUST.

We worked on different posts of users on reddit to early detect the depressed users by analyzing their posts. This is a Natural Language Processing (NLP) task. Different feature sets were used to find out the best results. We experimented with different deep learning models to decide what models are more suitable to detect depression early. We have also developed a hybrid model of deep learning for early depression detection.
